

# Dragonfly Nymph Order

Nymphs eat mosquito larvae before the mosquitoes hatch. As adults, they catch mosquitoes on the fly. They do not sting or bite humans.

**How are nymphs placed?** Nymphs arrive in plastic containers. They should be placed at the water's edge in shallow free-standing water where mosquitoes breed (areas where peepers can be heard or where cattails grow). Waters should be free of fish habitation as they will eat nymphs. 100 nymphs will cover approximately 1 to 2 acres of standing water. **YOU MUST HAVE SOME FORM OF STANDING WATER FOR NYMPHS TO THRIVE.**

**Please Note:** *Nymphs are live and perishable and must be picked up and dispersed immediately. They will not survive in a hot car. There will be no refunds for orders that are not picked up on the pick-up date.*

**Other Important Information:** *Because nymphs are collected from nature, the pick-up date for nymphs is currently unavailable. We will communicate with everyone by email so please be sure to note your email address on this form AND check your emails during the month of May.*

## **\$80 per 50 nymphs**

*Limited quantity of 2,500 available this year.*

***Please complete this form in its entirety. Thank you!***
