Public meetings in Saco and Scarborough to share draft Route 1 recommendations

The Saco and Scarborough communities have been partnering with the Portland Area Comprehensive Transportation System (PACTS) to make Route 1 safer and more accessible for all modes of transportation, including motor vehicles, public transit, bicycles, and pedestrians. This planning process began in late 2018 and draft recommendations for the busy roadway are now ready for public comment.

Two public meetings invite input on the recommendations, one on June 20th in Scarborough at the Wentworth School and the second at Saco City Hall on June 27. Both will begin at 6 p.m. The public can also go to www.sacomaine.org/Route1 or www.scarboroughmaine.org/departments/planning-codes/planning to see the draft report and make comments.

Vehicle traffic on Route 1 is increasing, as is the use of the road by bicyclists and pedestrians. The plan intends to address the conflicts caused by these increases and create a business-friendly roadway that also encourages people to walk, bike and use transit. The road is also under significant development pressure in both communities.

In Saco, the plan recommends installing a Hybrid Traffic Signal at the Route 1 crosswalk by Thornton Academy. This type of signal would stop traffic much more effectively, making the crossing much safer for pedestrians, many of whom are students. And where Route 1 carries less traffic at the section north of Ross Road, the plan recommends the roadway be converted to three lanes, which would provide space to add sidewalks and shoulders for bicyclists.

In Scarborough, the plan recommends creating a "Gateway" intersection at Hillcrest Avenue to improve safety and help slow vehicles entering town from the Turnpike
connector. Through the Oak Hill area, the plan provides recommended guidance for connecting area businesses to surrounding neighborhoods as well as making the corridor a more inviting place that is unique to the Scarborough community.

There are over a hundred other recommendations included in the plan. These include identifying specific locations where traffic signal or intersection layout improvements would improve safety and traffic flow, adding bicycle lanes and paths, creating sidewalk expansions and upgrades such as better crossings and pedestrian refuges, enhancing streetscape aesthetics, improving bus stop safety and visibility, and streamlining the number of driveways along Route 1. The recommendations are guidelines, aimed at helping direct future public and private investments to improve the travel experience through the Route 1 corridor for all users.

The plan will be implemented incrementally as funding is available. The Portland Area Comprehensive Transportation System (PACTS) is managing the study, which lays the groundwork for a comprehensive, regionally consistent approach for Complete Street best practices in both communities.
