Field Scouting: David Melevsky, Chip Osborne, & Tom Kelly

Spring Brook:

- Good turf density.
- Bent grass pressures.
 - Cool season turf for golf.
- Minor weed pressures.
- Mowing height needs to be raised to 2.5"
- Stress free height for grass is 3", but 2.5" is reasonable for athletic turf. The more surface area of grass blade that is exposed allows greater photosynthesis that produces carbohydrates that are the real plant food. Organic fertilizers are the catalyst to this process.
- Fertilizer needed.
- Fairly easy transition to organics.

Applications:

6/18/2012: 10-0-3 Natural Fertilizer (1,100 lbs.)
6/19/2012: 7-0-2 Natural Fertilizer (330 gallons)
Spot treat w/ Fiesta
